

Sean Sullivan

Web Developer / Motion Graphics

I've been working with advertising agencies since 2007 developing front-end websites, applications, and media for all things digital. In my early days, I built custom Flash website experiences that consistently won awards. These days I mostly focus on HTML5/CSS/javascript creating front-end experiences for desktop and mobile users - and I specialize in creating custom WordPress build-outs from Figma designs. I'm familiar with backend technologies and work well with interfacing between the front and back end. I'm excellent with Photoshop and Adobe CS applications including After Effects. I've been working as a one-man-shop for many years now building and delivering digital content for agencies as needed.

Willing and able to learn whichever technology stack you have demand for.
